

Resolution

Corps Groundwater Mission

We would like to commend the Corps for their collaborative work with other federal, state, and private entities looking at unique methods to reduce the groundwater decline that is being experienced across the Lower Mississippi River Valley. Specifically, the Corps has played an integral role in the pilot injection project in Leflore County, and we appreciate their leadership in this critical area. We urge the Mississippi River Commission to get a briefing from officials at the Corps, the USDA-ARS National Sedimentation Laboratory, and the United States Geological Survey about this critical work, and for the Corps to be more involved in the water supply situation in the Lower Mississippi Valley. We ask the Corps to take an active role in these issues surrounding groundwater declines and continue our ask that the Corps take on groundwater declines as a critical mission.
