Resolution

Groundwater Permits

Delta Council acknowledges the evolution of changes which have occurred in the application for permitting of groundwater withdrawals in the Alluvial Aquifer. Also, we recognize the importance and basic needs of collecting accurate and complete information provided by the driller's logs collected from licensed well drillers at the offices of the Mississippi Department of Environmental Quality from licensed well drillers. As additional research findings have been developed over the past 25 years, Delta Council is appreciative of the steps taken by the Mississippi Department of Environmental Quality during the past year on the process and content of the groundwater permit and the driller's logs in order to ensure that both timely, accurate, and complete information is captured since this data will continue to be utilized to determine the scope of our challenges and the timetable facing us.

Adopted by: Delta Council Board of Directors
